

ONIXLINE ROTARY LOBE PUMP

Börger has drawn on its 25 years of experience in rotary lobe pump construction to develop the new ONIXline pump.

At the heart of the pump are the newly developed rotors. Their advanced geometry together with the flow-optimized pump casing ensure the best efficiency even with high pressures.

The **ONIXline** rotary lobe pump is used in place of other pumping systems that have reached their limits.

KEY FEATURES

- | | |
|---|---|
| • Compact - impressive performance with minimum space requirement | • High energy efficiency |
| • High flow rate | • Effective rotor geometry allows improved fluid dynamics |
| • Robust carrier and timing gear with precise rotors | • Minimal backflow of the fluid inside chamber |
| • Precise accuracy enables gentle, nearly pulsation-free pumping action | • Easily maintained |
| • Gentle pumping due to optimised inlet and outlet openings | • Lowest life cycle costs |

APPLICATIONS

- Oil & gas
- Chemical industry
- Offshore and marine industry
- Pulp and paper industry
- Sugar industry
